Primary Objectives

Objective 1: Help busy professionals consistently locate critical emails quickly and with minimal effort, reducing missed information and delays.

Objective 2: Reduce missed or late action items caused by difficulty locating important emails.

OKRs (Key Results)

Result 1 – Retrieval Speed (Lagging Indicator):

At least 90% of important emails are located by users within 15 seconds when needed.

Result 2 – Search Time Reduction (Lagging Indicator):

Average daily time spent trying to locate important emails is reduced by at least 50%.

Result 3 – Categorization Accuracy (Leading Indicator):

95% of important emails are placed in the correct category on the first interaction, making them easy to find later.

Result 4 – Missed Actions (Lagging Indicator):

Missed or late action items due to not finding important emails in time decrease by 40%.

KPIs (Ongoing Metrics Tracked)

- Percentage of important emails located within 15 seconds
- Average daily time spent locating for important emails (minutes per day)
- Email categorization accuracy rate (percentage)
- Number of missed or late action items per month caused by not finding important emails

Short Critique

Assumptions these metrics rely on:

- Users can clearly and consistently identify which emails are important
- Faster retrieval directly improves productivity and timely task completion
- Users accurately report missed or late actions

Where these metrics might miss user value:

- They do not directly measure emotional relief, reduced anxiety, or confidence in managing communication
- They do not capture long-term trust in the system
- They may not catch the few times when a very important email is missed
