OKR Draft
2/9/26

Primary Objective

Help busy professionals quickly find important emails when they need them without scrolling, searching, or missing information.

OKRs (Key Results)

Result 1 – Retrieval Speed (Lagging Indicator):

90% of important emails are retrieved within 15 seconds.

Result 2 – Search Time Reduction (Lagging Indicator):

Average daily time spent searching for important emails is reduced by 50%.

Result 3 – Categorization Accuracy (Leading Indicator):

95% of important emails are correctly categorized into the appropriate folders.

Result 4 – Missed Actions (Lagging Indicator):

Missed or late action items caused by lost emails decrease by 40%.

KPIs (Ongoing Metrics Tracked)

- Percentage of important emails retrieved within 15 seconds
- Average daily time spent searching for important emails (minutes per day)
- Email categorization accuracy rate (percentage)
- Number of missed or late action items due to lost emails per month

Short Critique

Assumptions these metrics rely on:

- Users can clearly identify which emails are important
- Faster retrieval improves productivity and task completion
- Users accurately report missed or late actions

Where these metrics might miss user value:

- They do not measure reduced stress or peace of mind
- They do not capture long-term trust in the system
- They may not reflect rare but critical missed messages
